

DIRECTIONS FOR USE

GENERAL HYGIENE

Spread DryStart on wet or damp areas at the rate of 50 to 100 g/m², two to three times per week, to help reduce ammonia and improve overall hygiene. This amount may be increased or decreased without risk. Frequency of use may be increased as required.

SWINE

Dry Sows, Boars, Nursery, Grower/Finisher Units: Apply 100 to 300 g/m², two to three times per week or as required.

Farrowing Crates: Apply daily by spreading DryStart over the flooring, especially in any wet or damp areas.

DAIRY

Cows (Tie or Free Stall), Calf Pens, Hutches: Apply DryStart two to three times per week at a rate of 100 g/m².

POULTRY

Apply when starting a new flock at the rate of 50 to 100 g/m² starting at day one. Repeat weekly or as required.

EQUINE

Apply DryStart weekly at the rate of 200 g/m².

HANDLING AND STORAGE

Keep container closed and store in a cool, dry area for maximum stability. Avoid leaving container open for extended periods of time.

CAUTIONS

1. Do not mix with other products.
2. Keep out of reach of children.

The future of nutrition

Start your future now with our *Start of a Lifetime* research-proven products – each one targeted to provide a specific solution.

A safe, low-cost management tool for livestock and the environment.

Swine

DryStart can be used in all stages of pork production from farrowing and nursery barns right through to finish.

bacteria-causing moisture and unpleasant odours. DryStart absorbs fluids and moisture from bedding, helping to reduce ammonia levels and increase overall hygiene.

NEWBORN PIGLETS

Piglets are born wet and it takes a lot of energy for them to dry themselves off. The use of DryStart helps to speed drying and prevent chilling. DryStart also helps to dry the navel, reducing the risk of infection. Apply to flooring where piglets lie, making their environment more comfortable, dry and warm.

A hygienic, ready-to-use drying powder that can be used with all classes of livestock. Easy to use and handle.

Using DryStart is an economical way to improve the hygiene in your barn, helping to create a better environment for your livestock and staff.

WHEN TO USE IT

Use DryStart wherever you have damp and/or dirty floors. With regular application, the powder will help to discourage the production of bacteria and ammonia by keeping floors clean and dry. DryStart may also reduce ammonia levels in livestock bedding.

Dairy

DryStart is safe to use for dairy cattle.

COWS AND CALVES

Use DryStart to help keep bedding cool and dry and to minimize ammonia odour. DryStart may help reduce pathogens by drawing out moisture from the bedding. This can also aid in foot health, keeping the feet clean, dry and hard.

Use DryStart on floors to keep them dry and decrease chance of slipping.

Poultry

DryStart is safe to use for poultry.

Apply DryStart on pen floors to create a more comfortable environment for poultry. High humidity and temperatures cause an increase in bacteria and ammonia. Extended exposure to ammonia can cause respiratory problems and increase vulnerability to disease. DryStart may help lower ammonia evaporation and aid in the prevention of respiratory diseases.

Equine

DryStart is safe to use for horses. Apply DryStart to bedding to help decrease
